

K Praveen Kumar

Snapshot prepared 3 September 2026.

Live HTTPS URL: <https://k-praveenkumar.netlify.app>

Required launch checks

✓ Live custom-domain fallback over HTTPS

The clean fallback subdomain **k-praveenkumar.netlify.app** returned successfully over HTTPS.

✓ Live title and favicon

The real address has the title “K Praveen Kumar — ML Engineer” and a favicon.

• Analytics screenshot — revise

Analytics is not installed, so there is no truthful analytics-installed screenshot yet. It requires an account or site token.

• Social-share preview — revise

Open Graph metadata is prepared locally but has not yet been published to the real address.

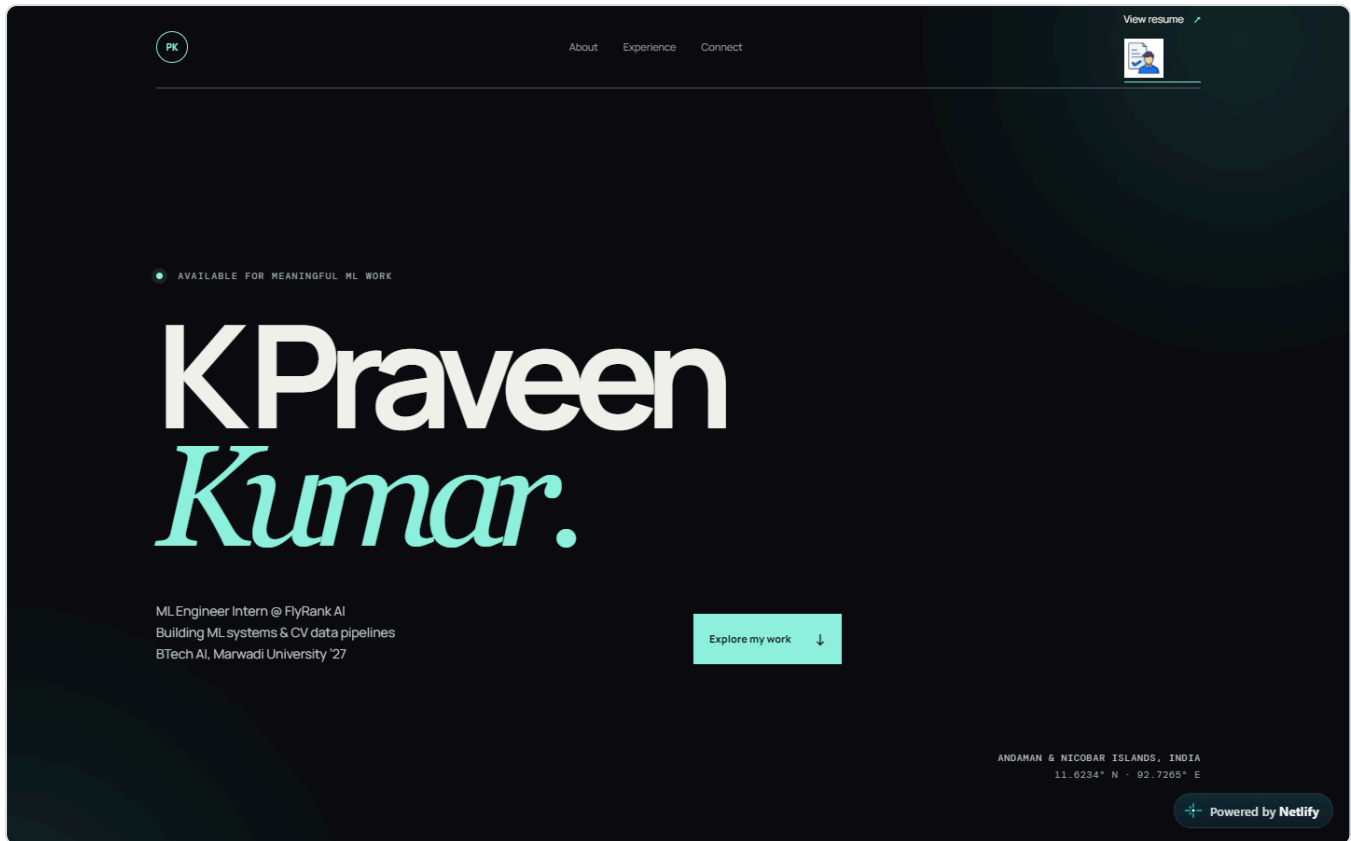

• Graduate badge in live footer — revise

The official badge is prepared locally; publishing it and adding the personal credential ID are still required.

• Personal verification page — revise

The exact verification link needs K Praveen Kumar’s FlyRank credential ID.

Live URL screenshot

Captured from <https://k-praveenkumar.netlify.app> on 3 September 2026.

Pass / revise result

Current result: revise. The site satisfies the clean fallback-subdomain and HTTPS requirement. It cannot yet pass the remaining requirements because analytics, the published social preview, and the personally verifiable footer badge are not live.

What is needed to complete launch

- Provide the chosen domain and DNS registrar access.
- Provide analytics access or a Cloudflare Web Analytics site token.
- Provide the FlyRank credential ID for the personal verification URL.
- Publish the prepared local updates to Netlify.

This report distinguishes confirmed live checks from items that still require account-specific access or publishing.
